The history of nude photography is the history of people's fascination with the topic. This book offers a cross-section of the history of nude photography, ranging from the earliest nude daguerreotypes and ethnographic nude photographs to experimental nude photography.

This book explores the question of realism in motion pictures. Specifically, it explores how understanding the role of realism in the history of title sequences in film can illuminate discussions raised by the advent of digital cinema. *Ideologies of the Real in Title Sequences, Motion Graphics and Cinema* fills a critical and theoretical void in the existing literature on motion graphics. Developed from careful analysis of André Bazin, Stanley Cavell, and Giles Deleuze's approaches to cinematic realism, this analysis uses title sequences to engage the interface between narrative and non-narrative media to consider cinematic realism in depth through highly detailed close readings of the title sequences for *Bullitt* (1968), *Kolchak: The Night Stalker* (1974), *The Number 23* (2007), *The Kingdom* (2008), *Blade Runner: 2049* (2017) and the James Bond films. From this critique, author Michael Betancourt develops a modal approach to cinematic realism where ontology is irrelevant to indexicality. His analysis shows the continuity between historical analogue film and contemporary digital motion pictures by developing a framework for rethinking how realism shapes interpretation.

The definitive history of photography book, *Seizing the Light: A Social & Aesthetic History of Photography* delivers the fascinating story of how photography as an art form came into being, and its continued development, maturity, and transformation. Covering the major events, practitioners, works,

and social effects of photographic practice, Robert Hirsch provides a concise and discerning chronological account of Western photography. This fundamental starting place shows the diversity of makers, inventors, issues, and applications, exploring the artistic, critical, and social aspects of the creative process. The third edition includes up-to-date information about contemporary photographers like Cindy Sherman and Yang Yongliang, and comprehensive coverage of the digital revolution, including the rise of mobile photography, the citizen as journalist, and the role of social media. Highly illustrated with full-color images and contributions from hundreds of artists around the world, *Seizing the Light* serves as a gateway to the history of photography. Written in an accessible style, it is perfect for students newly engaging with the practice of photography and for experienced photographers wanting to contextualize their own work.

Starts with an overview of today's FPGA technology, devices, and tools for designing state-of-the-art DSP systems. A case study in the first chapter is the basis for more than 30 design examples throughout. The following chapters deal with computer arithmetic concepts, theory and the implementation of FIR and IIR filters, multirate digital signal processing systems, DFT and FFT algorithms, and advanced algorithms with high future potential. Each chapter contains exercises. The VERILOG source code and a glossary are given in the appendices, while the accompanying CD-ROM contains the examples in VHDL and Verilog code as well as the newest Altera "Baseline" software. This edition has a new

chapter on adaptive filters, new sections on division and floating point arithmetics, an up-date to the current Altera software, and some new exercises.

The Encyclopedia of Nineteenth-Century Photography is the first comprehensive encyclopedia of world photography up to the beginning of the twentieth century. It sets out to be the standard, definitive reference work on the subject for years to come. Its coverage is global – an important “first” in that authorities from all over the world have contributed their expertise and scholarship towards making this a truly comprehensive publication. The Encyclopedia presents new and ground-breaking research alongside accounts of the major established figures in the nineteenth century arena. Coverage includes all the key people, processes, equipment, movements, styles, debates and groupings which helped photography develop from being “a solution in search of a problem” when first invented, to the essential communication tool, creative medium, and recorder of everyday life which it had become by the dawn of the twentieth century. The sheer breadth of coverage in the 1200 essays makes the Encyclopedia of Nineteenth-Century Photography an essential reference source for academics, students, researchers and libraries worldwide.
