When I was in high school we did a similar experiment but we took flat clear petri dishes filled with I believe it was clear gelatin and sampled different things like sticking our finger to the surface, or leaving one set out in a barn, etc. Bacteria are everywhere, including your mouth, intestines, genitals, arm pits, toe jam, etc.

ok what if i leave my spit in a jar will bacteria start to ...

The answer is : At the end of 59th minute. If the bacteria doubles every minute and if by the end of an hour (i.e. 60 minutes) the jar is full, then by the end of 59th minute the jar must be half full so that within a minute, it can double to fill the jar completely.
