Magnetism Cheat Sheet. Magnets exist always in dipoles North Pole (represented by N) and South Pole (represented by S). If you break the rock into pieces you get small magnets and each magnet also has two poles N and S. Same poles of the magnet like in the electricity repel each other and opposite poles attract each other.

List of electromagnetism equations - Wikipedia

The equation for the magnitude of the electric field in this setup is: $E = \frac{V}{d}$ (2) where, V is the voltage difference, and d the distance, between the plates. The electric field flows from the positive plate to the negative, the opposite direction to the direction of increasing voltage; this results in the negative sign.
