An LED driver is a self-contained power supply which has outputs that are specifically designed to match the requirements of the LED device or devices that it's connected to. To run properly LED lights require a precise balance of current and voltage to deliver the right amount of power. LED drivers fall into two main types; Constant Current and Constant Voltage .

~~Home Lighting LED Drivers for sale | eBay~~

LED Drivers If you have made the decision to install LED lights into your home or business property, then you will also require an LED power supply. These LED drivers are an essential part of any LED lighting set-up, as they provide your new LED lighting display with the power source required to operate the ultra-bright LED lights.

~~LED Drivers | Simple Lighting~~

LED lighting provides superior lighting conditions in exchange for reduced energy consumption. Replacing traditional halogen and fluorescent installations with LED lighting will allow you to benefit from enhanced lighting conditions, dramatic savings on your electricity costs and a much smaller carbon footprint.
