Professional competencies in nurses and midwives. In view of these changes this title is organized into 14 chapters. Ideally the text is flowed sequentially, but every effort has been made to respect the differing needs of diverse curricula and students. Thus each chapter stands on its own merit and may be read independently of others. Every attempt has been made to maintain simplicity and lucidity of language and style, so that student can grasp the subjects very clear and completely.

A strong clinical emphasis is present throughout this volume from the first section of commonly presenting problems through to the section addressing problems shared with a range of other clinical sub-specialties.

Data is fundamental to the modern world. From economic development, to healthcare, to education and public policy, we rely on numbers to allocate resources and make crucial decisions. But because so much data fails to take into account gender, because it treats men as the default and women as atypical,
