A female marine's ∩absorbing memoir∩ recounting her work with the remains and personal effects of fallen soldiers and her battle with PTSD (Publishers Weekly). In 2008, CBS chief foreign correspondent Lara Logan candidly speculated about the human side of the war in Iraq: ∩Tell me the last time you saw the body of a dead American soldier. What does that look like? Who in America knows what that looks like? Because I know what that looks like, and I feel responsible for the fact that no one else does... ∩ Logan's query raised some important yet ignored questions: How did the remains of American service men and women get from the dusty roads of Fallujah to the flag-covered coffins at Dover Air Force Base? And what does the gathering of those remains tell us about the nature of modern warfare and about ourselves? These questions are the focus of Jessica Goodell's story Shade It Black: Death and After in Iraq. Goodell enlisted in the Marines immediately after graduating from high school in 2001, and in 2004 she volunteered to serve in the Marine Corps' first officially declared Mortuary Affairs unit in Iraq. Her platoon was tasked with recovering and processing the remains of fallen soldiers. With sensitivity and insight, Goodell describes her job retrieving and examining the remains of fellow soldiers lost in combat in Iraq, and the psychological intricacies of coping with their fates, as well as her own. Death assumed many forms during the war, and the challenge of maintaining one's own humanity could be difficult. Responsible for diagramming the outlines of the fallen, if a part was missing she was instructed to ∩shade it black∩. This insightful memoir also describes the difficulties faced by these Marines when they transition from a life characterized by self-sacrifice to a civilian existence marked very often by self-absorption. In sharing the story of her own journey, Goodell helps us to better understand how post-traumatic stress disorder affects female veterans. With the assistance of John Hearn, she has written one of the most unique accounts of America's current wars overseas yet seen.

Presents a history of the Black Death, describing its origins in China, its rapid spread through Europe between 1347 and 1353, the impact of depopulation on the European economies, and the periodic outbreaks that continued until the the discovery of antibiotics in the twentieth century.

A spine-chilling saga of virulent racism, human folly, and the ultimate triumph of scientific progress. For Chinese immigrant Wong Chut King, surviving in San Francisco meant a life in the shadows. His passing on March 6, 1900, would have been unremarkable if a city health officer hadn't noticed a swollen black lymph node on his groin/a sign of bubonic plague. Empowered by racist pseudoscience, officials rushed to quarantine Chinatown while doctors examined Wong's tissue for telltale bacteria. If the devastating disease was not contained, San Francisco would become the American epicenter of an outbreak that had already claimed ten million lives worldwide. To local press, railroad barons, and elected officials, such a possibility was inconceivable/or inconvenient. As they mounted a cover-up to obscure the threat, ending the career of one of the most brilliant scientists in the nation in the process, it fell to federal health officer Rupert Blue to save a city that refused to be rescued. Spearheading a relentless crusade for sanitation, Blue and his men patrolled the squalid streets of fast-growing San Francisco, examined gory black buboes, and dissected diseased rats that put the fate of the entire country at risk. In the tradition of Erik Larson and Steven Johnson, Randall spins a spellbinding account of Blue's race to understand the disease and contain its spread∩the only hope of saving San Francisco, and the nation, from a gruesome fate.

In the mid-fourteenth century the Black Death ravaged Europe, leading to dramatic population drop and social upheavals. Recurring plague outbreaks together with social factors pushed Europe into a deep crisis that lasted for more than a century. The plague and the crisis, and in particular their short-term and long-term consequences for society, have been the matter of continuous debate. Most of the research so far has been based on the study of written sources, and the dominating perspective has been the one of economic history. A different approach is presented here by using evidence and techniques from archaeology and the natural sciences. Special focus is on environmental and social changes in the wake of the Black Death. Pollen and tree-ring data are used to gain new insights into farm abandonment and agricultural change, and to point to the important environmental and ecological consequences of the crisis. The archaeological record shows that the crisis was not only characterized by abandonment and decline, but also how families and households survived by swiftly developing new strategies during these uncertain times. Finally, stature and isotope studies are applied to human skeletons from medieval churchyards to reveal changes in health and living conditions during the crisis. The conclusions are put in wider perspective that highlights the close relationship between society and the environment and the historical importance of past epidemics.
