Stirling Cycles Engines by Andy Ross - AbeBooks

Stirling Engine with Ross yoke. Speed 10 fps. Andy Ross, a prominent Stirling engine experimenter, developed a Stirling engine using the linkage illustrated here. This engine is identical in operation to the two cylinder Stirling. In this illustration, the left cylinder is the hot cylinder. The linkage allows the engine to be more compact, and reduces side loads on the pistons and connecting rods (because their travel is almost linear).

The two-cylinder Stirling with Ross yoke is a two-cylinder stirling engine (positioned at 0 ° , not 90 °) connected using a special yoke. The engine configuration/yoke setup was invented by Andy Ross. The Franchot engine is a double acting engine invented by Charles-Louis-Félix Franchot in the nineteenth century. In a double acting engine, the pressure of the working fluid acts on both sides of the piston.
