The present book entitled "A Text book of Botany: Diversity of Microbes" has been written with the feeling that it will usefully serve the purpose of B.Sc. students. Basic as well as modern views are considered. Informative & understandable diagrams have been incorporated in this book. The content is

Get Free Text Book Of Botany Diversity And Systematics Of Seed Plants

very simple. In preparation of book many books & papers have been consulted. I hope that this book will continue to serve its purpose in understanding the basic principles of Botany & securing at the same time maximum marks in examination by the students.

A standard textbook that provides a concise account the plant kingdom, first published in 2000.

This exciting new textbook examines the concepts of evolution as the underlying cause of the rich diversity of life on earth-and our danger of losing that rich diversity. Written as a college textbook, *The Diversity and Evolution of Plants* introduces the great variety of life during past ages, manifested by the fossil record, using a new natural classification system. It begins in the Proterozoic Era, when bacteria and bluegreen algae first appeared, and continues through the explosions of new marine forms in the Helikian and Hadrynian Periods, land plants in the Devonian, and flowering plants in the Cretaceous. Following an introduction, the three subkingdoms of plants are discussed. Each chapter covers one of the eleven divisions of plants and begins with an interesting vignette of a plant typical of that division. A section on each of the classes within the division follows. Each section describes where the groups of plants are found and their distinguishing features. Discussions in each section include phylogeny and classification, general morphology, and physiology, ecological significance, economic uses, and potential for research. Suggested readings and student exercises are found at the end of each chapter.

Section-I Gymnosperms 1. Evolution of Seed Habit 2. General Characters and Affinities of Gymnosperms 3. Gymnosperms: Classification and Distribution 4. Palaeobotany and Geological Time Scale 5. Fossilization and Types of Fossils 6. Pteridospermopsida: Lyginopteris, Heterangium, Glossopteris and Caytonia 7. Cycadeoidospida (Bennettiopsida) Cycadeoidales: Ptilophyllum, Williamsonia, Cycadeodia 8. Cycadales: Cycas 9. Coniferales: Pinus 10. Coniferales: Cedrus 11. Taxales: Taxus 12. Ephedrales: Ephedra 13. Gnetales: Gnetum Prof. Birbal Sahni (1891-1949): The Father of Indian Palaeobotany Objective Questions Section-II Angiosperms 1. Origin and Evolution of Angiosperms 2. Primitive Angiosperms 3. History of Taxonomy and Systems of Classification 4. Plant Identification and Taxonomic Keys 5. Taxonomic Literature 6. Plant Nomenclature 7. Herbarium Techniques 8. Modern Trends in Plant Taxonomy 9. Synopsis of Selected Families 10. Some Important Families of Dicotyledons 11. Some Important Families of Monocotyledons Objective Questions

A comprehensive text and reference book covering all the aspects of biodiversity science for students and researchers of biodiversity, plant science, biotechnology, as well as zoology.
