Functional disorders are one of the commonest reason for patients to see a neurologist. They include problems such as dissociative (non-epileptic) seizures, functional movement disorders (such as tremors, spasms or jerks) and functional limb weakness. Functional Neurological Disorders (sometimes abbreviated to FND) are genuine and often disabling.

Functional disorders | The University of Edinburgh

A *functional disorder* is a medical condition that impairs normal functioning of bodily processes that remains largely undetected under examination, dissection or even under a microscope. At the exterior, there is no appearance of abnormality. This stands in contrast to a structural disorder or a psychosomatic disorder. Definitions vary somewhat between fields of medicine. Generally, the mechanism that causes a functional disorder is unknown, poorly understood, or occasionally unimportant for tre
