This is a brand new edition of the leading reference work on histological techniques. It is an resource suited to all those involved with histological preparations and applications, from the student to the highly experienced laboratory professional. New to this edition: Brand new co-editor. Self assessment questions and answers. Will help reinforce all of the basics in order to pass course exams, professional certification exams. New material on immunohistochemical and molecular diagnostic techniques. Enables user to keep abreast of latest advances in the field.

For 40 years, Bancroft's Theory and Practice of Histological Techniques has established itself as the standard reference for histotechnologists and laboratory scientists, as well as histopathologists. With coverage of the full range of histological techniques used in medical laboratories and pathology departments, it provides a strong foundation in all aspects of histological technology - from basic methods of section preparation and staining, to advanced diagnostic techniques such as immunocytochemistry and molecular testing. This revised and updated 8th Edition by Kim S. Suvarna, Christopher Layton, and John D. Bancroft is a one-stop reference for all those involved with histological preparations and applications, from student to highly advanced laboratory professional.

This is a brand new edition of the leading reference work on histological techniques. It is an essential and invaluable resource suited to all those involved with histological preparations and applications, from the student to the highly experienced laboratory professional. This is a one stop reference book that the trainee histotechnologist can purchase at the beginning of his career and which will remain valuable to him as he increasingly gains experience in daily practice. Thoroughly revised and up-dated edition of the standard reference work in histotechnology that successfully integrates both theory and practice.Provides a single comprehensive resource on the tried and tested investigative techniques as well as coverage of the latest technical developments. Over 30 international expert contributors all of whom are involved in teaching, research and practice.Provides authoritative guidance on principles and practice of fixation and staining. Extensive use of summary tables, charts and boxes.Information is well set out and easy to retrieve. Six useful appendices included (SI units, solution preparation, specimen mounting, solubility). Provides practical information on measurements, preparation solutions that are used in daily laboratory practice. Color photomicrographs used extensively throughout. Better replicates the actual appearance of the specimen under the microscope. Brand new co-editors. New material on immunohistochemical and molecular diagnostic techniques.Enables user to keep abreast of latest advances in the field.

Revised and updated edition (1st was 1981) of a textbook on chemical and physical principles of fixation, staining and histochemistry. For students i all biological subjects using histological techniques, as well as researcher and medical laboratory technologists. Annotation copyright Book News, Inc

Histochemical Techniques, 2nd Edition deals with different methods of tissue processing and their application to histochemical procedures, including freeze drying and freeze substitution. Topics covered include fixation, production of paraffin and frozen sections, and principles of enzyme histochemistry. The use of histochemical methods to demonstrate carbohydrates, proteins, amino acids, lipids, nucleic acids, pigments, and various enzymes is also discussed. This book is comprised of 20 chapters and begins with an overview of the problems and values of histochemistry. The discussion then turns to carbohydrates, along with concepts and methods in carbohydrate histochemistry such as blocking and enzyme methods. Other chapters focus on amyloids, pigments, minerals, phosphatases, and esterases. The principles of enzyme histochemistry are also considered, with emphasis on preservation and factors affecting enzyme activity. The final chapter is devoted to ultra-histochemistry, the application of histochemistry to electron microscopy. This monograph will be of interest to histochemists, histopathologists, and technologists involved in histochemical work.

This textbook gives the reader a thorough grounding in all aspects of histological techniques, including an understanding of basic methods. It encompasses three advances that have taken place since 1977, providing a balance between the new and the traditional techniques.

From reviews: "Histological and Histochemical Methods is a tour de force wholly suited to the modern age of histology and Professor Kiernan has triumphed again. To cover so much ground clearly and concisely while including the justification of the underlying chemistry makes this book unique. There should not be a histology laboratory or an undergraduate library that does not own a copy." Biotechmic & Histochemistry 2016, 91(2): 145. "This book should be present on the bookshelves of every research or analysis laboratory where histology and histochemistry are routinely used, as an essential reference source of basic and practical information for scientists and technicians." European Journal of Histochemistry 2016, vol. 60. This fifth edition of Histological and Histochemical Methods continues to provide a clear and consistent introduction to the techniques, description and analysis of the chemical and physical principles of fixation, tissue processing, staining, enzyme locaton, immunohistochemistry and other key procedures. The overall structure of the book remains unchanged, but the content has been heavily revised to update the techniques used in line with recent technological advances. Additionally, there are new sections on: Artefacts and troubleshooting Methods for microorganisms and fungi in sections Methods for various pigments and mineral deposits in tissues Methods for skeletal elements (bone, cartilage) in whole-mounts Histological and Histochemical Methods 5e is essential reading for students, lecturers, researchers and professionals using histological and histochemical techniques.

The Collected Papers of Paul Ehrlich, Volume I covers topics on histology, biochemistry, and pathology. The book presents topics on practice and theory of staining in histology; cytology of the blood in health and disease; and the staining of bacteria and its application to diagnosis. The text also includes topics on the requirement of the organism for oxygen and other allied biochemical studies; pharmacology, therapeutics and toxicology; and the diazobenzenesulphonic acid and dimethylaminobenzaldehyde reactions.
